

POLLINATORS AT WORK

DO NOT DISTURB

Stingless Leafcutter Bees have been placed in this area to help our habitat & ecosystem grow stronger.

LEARN ABOUT LEAFCUTTER BEES:

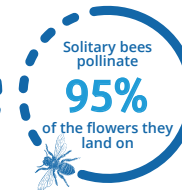

DO NOT STING – There is no hive or queen to protect, so they are non-aggressive and do not sting.

SOLITARY BEES – They work alone, find their own food, build their own nest and lay their own eggs.

BELLY FLOPPERS – Leafcutter bees **BELLY FLOP** onto flowers and get pollen all over their bodies.

TINY SUPER POLLINATORS – Size of a watermelon seed, these tiny bees are the superheroes of your garden.

MAKES MORE FOOD – They pollinate 95% of everything they land on and reach the smallest flowers, helping you make more fruits and veggies!
